

What are the methods of centering an element in CSS?

There are several methods to center an element in CSS. You can use `margin:auto`, `text-align:center`, flexbox, or CSS grid to achieve centering based on the layout and specific requirements of the project.

Example:

```
.centered-element {  
  display: flex;  
  justify-content: center;  
  align-items: center;  
}
```
